

What is claimed is:

1. A fishing line container assembly, comprising:
a fishing line compartment including:
a flap having an outer area and an inner area, and
at least a first strap having an attached end and being defined by an open state
5 and a closed state, said first strap being usable to join a first spool to said flap when said first
strap is in said closed state.
2. The fishing line container assembly of Claim 1 wherein said first strap has an
attaching end that is joined to said inner area when said first strap is in said closed state.
3. The fishing line container assembly of Claim 1 wherein said first strap has an
attaching end with a first mating element and said attached end has a mating element and in
which said mating elements are joined together when said first strap is in said closed state.
4. The fishing line container assembly of Claim 1 wherein said first strap
includes a Velcro® strap.
5. The fishing line container assembly of Claim 1 wherein said flap has a hinged
section and a movable section and in which said attached end is located closer to said
movable section than to said hinged section.
6. The fishing line container assembly of Claim 1 wherein said first strap has a
length and said inner area has a lateral extent and in which said first strap length is greater
than one-half of said lateral extent.
7. The fishing line container assembly of Claim 1 further comprising a second
strap usable in joining a second spool to said flap, said second strap being spaced along a
longitudinal extent of said flap from said first strap.

8. The fishing line container assembly of Claim 1 wherein said first strap has an attaching end and said attaching end is joined to said attached end by a snap connection to provide said closed state.

9. The fishing line container assembly of Claim 1 comprising at least a first cover located outwardly of portions of said first strap when said first strap is in said closed state.

10. The fishing line container assembly of Claim 9 wherein said first cover has at least a first connection segment joined to said flap.

11. The fishing line container assembly of Claim 9 wherein said first cover has a lateral extent extending laterally along said flap and in which said first cover lateral extent is less than the length of said first strap.

12. The fishing line container assembly of Claim 9 wherein said attached end is laterally spaced from said first cover.

13. The fishing line container assembly of Claim 9 further comprising a second cover having at least a first connection segment joined to said flap and said first cover has a second connection segment joined to said flap adjacent to said first connection segment of said second cover.

14. The fishing line container assembly of Claim 1 wherein said flap includes a hinged section and further comprising at least a first access hole adjacent to said hinged section for receiving fishing line therethrough.

15. A fishing line container assembly of Claim 1 further including at least a primary container area joined to but spaced from said fishing line compartment.

16. The fishing line container assembly of Claim 1 further comprising a support subassembly for holding at least said fishing line compartment adjacent to a user's body.

17. A method for facilitating use of fishing line by a fisher, comprising:
providing at least a first spool having a bore and fishing line;
inserting a strap through said bore;
establishing a closed state of said strap; and
5 locating said fishing line from said first spool for use by the fisher.

18. The method of Claim 17 further including creating tension on said fishing line when pulled from said first spool using at least portions of said strap within said bore.

19. The method of Claim 17 wherein said strap has an attached end and an attaching end and in which said inserting step includes inserting said attaching end through said bore.

20. The method of Claim 17 wherein a cover overlies at least portions of said first spool.

21. The method of Claim 20 wherein said inserting step includes inserting said strap while said bore is located outwardly of said cover.

22. The method of Claim 21 wherein said locating step includes positioning at least portions of said first spool under said cover.
